Desk Drop Tent card: print spec

Template v1.2 · 2026-10-23 · file: templates/tent-card/tent-card.html

No commercial print run until the name is cleared (desk-drop-legal-pack/name-check-log.md). Home test prints are fine.

US Letter sheet, 8.5 x 11 in

Black: trim (cut) line, 7 x 10 in. Blue dashes: safe area, 0.25 in inside the trim. Red: fold. The top face prints upside down so both faces read upright when the card stands.

Finished size	Each face 7 in wide x 5 in tall (landscape). Two identical faces.
Flat size	7 x 10 in, one card per US Letter sheet, centred (0.75 in side margins, 0.5 in top and bottom).
Fold	Tent fold across the middle (5 in from each short edge), print on the outside. Score first along a ruler with a bone folder or the back of a butter knife, then fold.
Bleed	None for home printing: nothing touches the trim, so a slightly off cut does not show. Print-shop file (`--mode pro`): page 7.25 x 10.25 in with 0.125 in bleed on all sides, no marks.
Safe area	0.25 in inside the trim on every edge, including the fold. All text and the QR stay inside it.
Marks	Corner crop marks offset 0.08 in, 0.22 in long. FOLD marks in both side margins.
Faces	Both faces carry the same content, so either side can face the room. Each sheet's top margin repeats the print settings; the bottom margin names the brand, card ID and campaign.
Numbers	The text face draws zero with a slash (0) so office IDs like O-001 cannot be misread.

Materials and printing

Stock	White matte cardstock, 80 to 110 lb cover (about 216 to 300 gsm; 4OVER4 conversion, opened 2026-10-23). Matte, not gloss: gloss throws glare into the close photo. Check your printer's maximum paper weight and use the rear or manual feed if it has one.
Color	Ink #1F1D1A text, cobalt #2E47C9 band and "Take one.", allergen text pure black #000000 on white. Chrome: turn on "Background graphics" or the cobalt band drops out.
Print settings	Paper Letter, Scale 100 (Actual size), Margins Default, Background graphics on. Never "Fit to page": it shrinks the locked allergen size.
QR code	1.15 to 1.45 in square including the four-module quiet zone the QR standard requires (Denso Wave, opened 2026-10-23). Error correction M. Encodes the office's link exactly. One unique link per office per campaign.
Run size	About 20 cards at a time (one per office plus one spare each). Each office's cards carry its own QR and card ID; never swap cards between offices.

Type sizes on the card (minimums are floors)

Element	Face	Size	Rule
Allergen statement and "may contain" line	Atkinson Hyperlegible Next SemiBold, black	**14 pt, LOCKED**	Copied word for word from the package. Never shortened, never smaller. Everything else gives way to it. The template refuses to print if it would render under 14 pt or if the text differs from what was entered.
Brand name	Bricolage Grotesque ExtraBold	36 to 72 pt	One line where possible; narrows to 75% width before it shrinks, and widens again at each smaller size if it can; two balanced lines only as a last resort.
Brand logo (optional)	The brand's own file (SVG, or PNG at least 300 px tall)	0.55 to 0.9 in tall	Never wider than the safe area. A wide logo (2.2 times wider than tall or more) replaces the typed name; a square or stacked logo prints beside the typed name.
"Take one."	Bricolage Grotesque ExtraBold, cobalt	22 pt	Fixed copy.
Two sentences	Atkinson Hyperlegible Next Regular	12 to 15 pt	200 characters or fewer.
"Tell us what you think", product line	Atkinson Bold / SemiBold	13 pt	
Find it at ... or use code ...	Atkinson SemiBold	10 to 11 pt	Works with the retailer half alone, the code half alone, or both.
"Allergens, as printed on the package" label	Atkinson Bold	9 pt	Fixed copy. Three versions, from where the package declares its allergens: a "Contains" statement; the whole ingredient list (no "Contains" line); a single-ingredient product's name (no ingredient list). There is no "no allergens" option: nobody judges an ingredient list by eye.
"Brought to you by" and wordmark	Atkinson Regular; wordmark file	8.5 pt; wordmark cap height 0.13 in	Wordmark sized by cap height, so a longer name stays readable.
Short link under the QR	Atkinson Regular	7.5 pt	
Card ID (office and campaign)	Atkinson Regular, stone	7 pt	For kitting only.

When the card is full: the give-way order

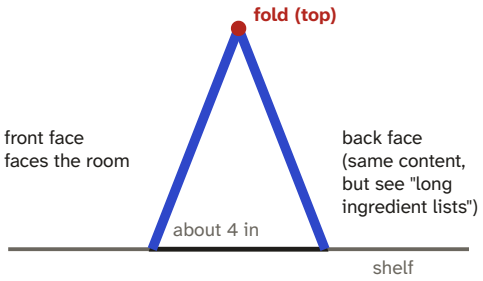

The template fits the card itself. If text does not fit, it gives way in this order and tells you on screen and in the render output: (1) a brand logo shrinks from 0.9 to 0.55 in; (2) the two sentences shrink from 15 to 12 pt; (3) spacing tightens; (4) the find-it line goes from 11 to 10 pt; (5) the QR shrinks from 1.45 to 1.15 in; (6) a two-line brand name goes back to one condensed line if it can; (7) the product line is left off; (8) the brand name shrinks toward 36 pt, widening again where it can; (9) the two sentences are left off. The name, the thing the wide photo depends on, gives way after the product line (review round 1).

Long ingredient lists. For a package whose only allergen declaration is its ingredient list, a list too long to share a face with the story and QR moves to a face of its own, and that face is the **front**: the brand name (43 to 36 pt), the whole list and "may contain" line at 14 pt, and where to buy. It is marked "this side faces the room" beside the card ID. The other face carries the story, "Take one" and the QR, and its panel points to the list. If the list is still too long, the "Take one" sentence and then the buy line leave the front (both are on the other face). If it still does not fit, the card prints a red DO NOT PLACE panel and the render command writes no PDF. The allergen panel never changes.

Placement and photos (from the plan's per-stop procedure)

- At eye level beside the existing snacks, never inside a cabinet. Card in front of the product, allergen panel visible. One display per pantry. A card marked "this side faces the room" stands with that side toward the room.
- Drop day: the wide photo (the whole pantry, product and card in view) is the report's placement photo; take a close photo too, for your own check. Day 3 or 5: the office sends a close photo of card and product (the report's later photo). Close photo: about arm's length, the card at least a fifth of the photo's width; zoom in and check you can read the allergen panel. No identifiable people in any photo.

Fold and stand

1. Cut on the corner marks (a paper trimmer gives the straightest edge).
2. Lay a ruler across the two FOLD marks and score the line, printed side up.
3. Fold with the print on the outside. Press the crease flat.
4. Open the tent to about 4 in between the feet so it stands without tipping.
5. Check: both faces read upright, and the card ID on each face matches the office you are delivering to.

Before you print: five checks

1. The allergen text matches the package word for word. Read it against the package, not against the brand's email.
2. The on-screen panel says "Ready to print" (no red or yellow items). No yellow highlighter is left on the card.
3. The QR scans from your phone and opens this office's link.
4. Chrome print settings: Letter, Scale 100, Background graphics on.
5. One test print on plain paper before the cardstock run.

Tests this spec passed (details in tests/README.md)

- 25-word allergen statement plus a 16-word "may contain" line fits at the locked 14 pt with the brand name still on one line.
- Wide pantry photo, simulated: card about 112 px tall in a 2,880 px photo; brand name identifiable, including a 33-character name. Card face downscaled to 120 px tall: name identifiable.
- Close photo at arm's length, simulated (26 mm-equivalent lens at 60 cm): allergen text legible at 4,032 px and at 2,048 px, and still readable when zoomed at 1,280 px. 11 pt failed and 12 pt was marginal at 1,280 px, which is why 14 pt is locked.
- QR decodes from the render and from the simulated close photo at 4,032 and 2,048 px.
