SAMPLE: this file holds 118 SAMPLE rows. Illustrative placeholders, not results. include_sample = Y (SAMPLE rows are counted)

Desk Drop · Friday scorecard

As of Fri 2026-12-11. Gate 0 is Fri 2026-11-13 (derived, founder to confirm). Counts are distinct offices or brands, by call_date.

Measure	Fri wk 1	Fri wk 2	Gate 0	As of	Target	How it is counted
Cut-off date	*2026-10-30*	*2026-11-06*	*2026-11-13*	*2026-12-11*		
Offices (Gate 0: at least 5 of 15 say yes in principle AND name a pantry owner AND a receiving window)						
Office conversations held	**3**	**7**	**13**	**14**	15	*Distinct offices (calc_org on Office_Log) by the cut-off. Two contacts at one company count once.*
Yes in principle, pantry owner named, receiving window named	**1**	**3**	**5**	**6**	5	*The Gate 0 count: one per office (calc_org), while its latest answer (Y, N or maybe, from any contact) by the cut-off is still Y. Under 30 or over 250 on a Tuesday: not counted (row below).*
Gate 0, office side	**not yet**	**not yet**	**PASS**	**PASS**		*PASS at the target. Before Gate 0 a shortfall is 'not yet'. From Gate 0: FAIL once 15 conversations are held; with fewer, INCOMPLETE (no failure response yet) until the final read, Fri 2026-11-27 (Config gate0_final_read), when a shortfall is FAIL.*
Yes in principle, any (owner or window may be missing)	**2**	**4**	**7**	**8**		*Offices whose latest answer is Y. The gap to the row above is follow-up work: get the owner and the window.*
Withdrawn after a yes (latest answer N or maybe): not counted	**0**	**0**	**1**	**1**		*Offices that said Y and later said N or maybe, by the cut-off. Set their Clay status to no or not_now.*
Yes with owner and window, but under 30 or over 250 on a Tuesday: not counted	**0**	**0**	**0**	**0**		*Plan: under 30 or over 250 on a Tuesday is excluded (Config office_floor, office_ceiling). If the number is right, it is not a participating office.*
Of the counted yeses: 30 to 39 on a Tuesday (your call)	**0**	**0**	**0**	**0**		*Counted above. The plan's band is 40 to 250; 30 to 39 is the founder's call before signing.*
Conversations with people you already know (channel warm-intro)	**1**	**1**	**3**	**3**	5	*Plan Phase 0: five of the fifteen office conversations should come from your own network. Set channel = warm-intro for anyone you knew before.*
Said maybe at least once (someone else must agree)	**0**	**1**	**2**	**2**		*Plan Phase 1: 'I need to ask facilities and HR' is a maybe, not a yes.*
Median budget-probe answer, USD a month	**$50**	**$50**	**$75**	**$75**		*First numeric answer per office; a range counts at its low end; 'no budget' counts as 0; no number is left out.*
Offices that gave a number (0 included)	**2**	**5**	**8**	**8**		*The n behind the median.*
Of those, said no budget (0)	**1**	**2**	**3**	**3**		*Counted inside the median.*
Offices naming $100 a month or more (decision-rule input), as of				**4**		*Plan decision rule: office-paid tier is tested if at least five offices named $100 a month or more.*
Shortlisted offices (shortlist = Y)	**2**	**5**	**9**	**10**	8	*Plan Phase 0 deliverable: a shortlist of 8 offices to pursue.*
Median monthly pantry spend today, USD, as of				**$850**	n=8	*First number per office, from Q1. Context for the budget probe.*
Brands (Gate 0: at least 3 of 15 say they would pay $500 or more AND the speaker controls the budget)						
Brand conversations held	**3**	**7**	**13**	**15**	15	*Distinct brands (calc_org on Brand_Log) by the cut-off. Two founders of one brand, or brands A grouped as one (company_group), count once.*
Would pay $500 or more and controls the budget	**2**	**3**	**6**	**7**	3	*The Gate 0 count, one per brand (calc_org): the higher of the two numbers is $500 or more and controls_budget = Y, while its latest answer by the cut-off, from any contact, still qualifies (a later controls_budget = N, or every number under $500, withdraws it).*
Gate 0, brand side	**not yet**	**PASS**	**PASS**	**PASS**		*PASS at the target. Before Gate 0 a shortfall is 'not yet'. From Gate 0: FAIL once 15 conversations are held; with fewer, INCOMPLETE (no failure response yet) until the final read, Fri 2026-11-27 (Config gate0_final_read), when a shortfall is FAIL.*
Strict read: named $500 or more BEFORE hearing $1,500, and controls the budget	**1**	**2**	**5**	**6**		*Shown so an anchored answer is not mistaken for an unprompted one. Withdrawn answers are left out here too.*
Withdrawn after saying $500 or more (a later call: no budget control, or a lower number): not counted	**0**	**0**	**0**	**0**		*Brands that qualified and later withdrew, by the cut-off. The financial model still counts them until it adopts the same rule (HANDOFF 2.3).*
Said $500 or more but the speaker does not control the budget	**0**	**1**	**1**	**1**		*Not counted for Gate 0 from that conversation. Ask for a call with the budget owner.*
Median brand number before $1,500 was mentioned, USD per campaign	**$375**	**$400**	**$500**	**$500**		*First numeric before-answer per brand; 'nothing' counts as 0; no number is left out.*
Brands that named a number before $1,500	**2**	**6**	**11**	**13**		*The n behind the median.*
Median brand number after hearing $1,500, USD per campaign	**$600**	**$700**	**$800**	**$850**		*First numeric after-answer per brand.*
Brands that answered after hearing $1,500	**3**	**6**	**7**	**8**		*The n behind the median.*
Brands qualified on a call (all seven checks Y, not excluded)	**2**	**2**	**5**	**5**		*From the qualifying-call columns (qual_q1 to qual_q7, qual_not_excluded). The brand's word; the founder verifies at payment.*
Shortlisted brands (shortlist = Y)	**2**	**3**	**6**	**7**	6	*Plan Phase 0 deliverable: a shortlist of 6 brands to pursue.*
Median quarterly sampling budget, USD (low end), as of				**$2,000**	n=15	*From Q2. Context: a $600 or $1,500 campaign against what they spend now.*
Gate 0 overall						
Gate 0 result	**not yet**	**not yet**	**PASS**	**PASS**		
Sentence for the Gate 0 decision (as of)	As of 2026-12-11: 6 of 14 offices said yes with a pantry owner and a receiving window (target 5); 7 of 15 brands would pay $500 or more and control the budget (target 3). Gate 0: PASS.					
If it fails (plan)	*Fewer than 3 brands: test the office-paid version for three more weeks. Fewer than 5 offices: change the cluster or the office size band, not the model.*					
If a side is INCOMPLETE (default, founder to confirm)	*Do not apply the failure response above to an INCOMPLETE side yet: the plan's test (5 of 15, 3 of 15) has not been run. Keep booking discovery calls on that side and read the As of column again on Fri 2026-11-20 (set Config as_of_date). The final read is Fri 2026-11-27 (Config gate0_final_read): from then a side still short reads FAIL and the response applies, the plan's 'stretch the weeks but keep the gates'. A side that passed goes ahead meanwhile.*					

Top three objections per side, as of (mentions across objection_1 to objection_3)

Office	Mentions	First quote logged for that code
Office side		
1. I need to ask facilities, HR or someone else (needs_approval)	**6**	SAMPLE: needs_approval (office 04)
2. Allergy or food-safety worry (allergy_policy)	**5**	SAMPLE: allergy_policy (office 01)
3. We already have a pantry vendor or contract (existing_vendor)	**2**	SAMPLE: existing_vendor / allergy_policy (office 02)
Brand side		
1. $600 / the price is more than we pay per sample elsewhere (price_per_sample)	**4**	SAMPLE: price_per_sample / what_we_get (brand 01)
2. We can seed offices ourselves for free (seed_ourselves)	**3**	SAMPLE: seed_ourselves / price_per_sample (brand 03)
3. What do we actually get out of it? (what_we_get)	**3**	SAMPLE: what_we_get (brand 04)

Pace and reply rate (from the Friday Clay paste)

Measure	Fri wk 1	Fri wk 2	Gate 0	As of	How it is counted
Office first touches sent	**14**	**27**	**33**	**39**	*Clay rows with touch_1_date on or before the cut-off.*
Office replies, all (any human reply, opt-outs included)	**9**	**18**	**22**	**24**	*Rows with last_reply_date on or before the cut-off; bounces and auto-replies excluded. Information only.*
Office reply rate, all replies (information only)	**64%**	**67%**	**67%**	**62%**	*All replies / first touches. Opt-outs and refusals count here, so this rate can look healthy while conversations fall short. It does not drive the check.*
Office conversation replies	**8**	**16**	**18**	**20**	*reply_type yes, maybe, needs_approval, send_info, referral, not_now or an objection (obj_*): a reply that can become a conversation. Not opt_out, no, wrong_person, bounce or out_of_office.*
Office conversation-reply rate	**57%**	**59%**	**55%**	**51%**	*Conversation replies / first touches. This drives the 20% check below: the plan's 150 messages at 20% is 30 conversations.*
Office conversations per first touch	**21%**	**26%**	**39%**	**36%**	*Conversations (above) / first touches. 15 from about 75 first touches is 20%.*
Office opt-outs	**0**	**1**	**2**	**2**	*Rows with opt_out_date on or before the cut-off. Every one must have do_not_contact = Y.*
Office opt-out rate	**0.0%**	**3.7%**	**6.1%**	**5.1%**	*Opt-outs / first touches. Over 5% (Config opt_out_rate_flag) with 3 or more opt-outs (opt_out_min_count) and 30 or more first touches: check targeting and copy (sending guide 6.3 to 6.4).*
Office reply-rate check (as of)	**OK: conversation replies at or above 20%.**				
Office opt-out check (as of)	**OK: fewer than 3 opt-outs, or 5% or under.**				
Brand first touches sent	**14**	**26**	**34**	**40**	*Clay rows with touch_1_date on or before the cut-off.*
Brand replies, all (any human reply, opt-outs included)	**9**	**16**	**23**	**25**	*Rows with last_reply_date on or before the cut-off; bounces and auto-replies excluded. Information only.*
Brand reply rate, all replies (information only)	**64%**	**62%**	**68%**	**63%**	*All replies / first touches. Opt-outs and refusals count here, so this rate can look healthy while conversations fall short. It does not drive the check.*
Brand conversation replies	**8**	**14**	**19**	**21**	*reply_type yes, maybe, needs_approval, send_info, referral, not_now or an objection (obj_*): a reply that can become a conversation. Not opt_out, no, wrong_person, bounce or out_of_office.*
Brand conversation-reply rate	**57%**	**54%**	**56%**	**53%**	*Conversation replies / first touches. This drives the 20% check below: the plan's 150 messages at 20% is 30 conversations.*
Brand conversations per first touch	**21%**	**27%**	**38%**	**38%**	*Conversations (above) / first touches. 15 from about 75 first touches is 20%.*

SAMPLE: this file holds 118 SAMPLE rows. Illustrative placeholders, not results. include_sample = Y (SAMPLE rows are counted)

Desk Drop · Friday scorecard

Brand opt-outs	**0**	**1**	**2**	**2**	*Rows with opt_out_date on or before the cut-off. Every one must have do_not_contact = Y.*
Brand opt-out rate	**0.0%**	**3.8%**	**5.9%**	**5.0%**	*Opt-outs / first touches. Over 5% (Config opt_out_rate_flag) with 3 or more opt-outs (opt_out_min_count) and 30 or more first touches: check targeting and copy (sending guide 6.3 to 6.4).*

Brand reply-rate check (as of) **OK: conversation replies at or above 20%.**
Brand opt-out check (as of) **OK: fewer than 3 opt-outs, or 5% or under.**

Email bounces to date (offices + brands) / first touches to date	**5.1%**	*Two or more bounces in a week, or over 2% once 100 email first touches have gone, pauses cold email for five business days (sending guide 3.4).*

By sequence variant and by channel, as of (pick winners only on large gaps; see sending guide 6.4)

Sequence or channel	Side	First touches	Replies, all	Reply rate, all	Conversation replies
office-discovery-A	office	20	9	45%	7
office-discovery-B	office	19	15	79%	13
office-selling-A	office	0	0		0
office-selling-B	office	0	0		0
brand-discovery-A	brand	20	10	50%	8
brand-discovery-B	brand	20	15	75%	13
brand-selling-A	brand	0	0		0
brand-selling-B	brand	0	0		0
office-conversion-A	office	0	0		0
brand-conversion-A	brand	0	0		0
channel: email	office	9	2	22%	1
channel: email	brand	10	3	30%	2
channel: linkedin	office	24	16	67%	13
channel: linkedin	brand	21	13	62%	10
channel: warm-intro	office	3	3	100%	3
channel: warm-intro	brand	9	9	100%	9
channel: walk-in	office	3	3	100%	3
channel: walk-in	brand	0	0		0

Sequence names come from Clay's sequence column. Edit the names in column A to match the variants in messages/05 to 07.

After Gate 0: Gate 1 progress (five offices signed with 350+ on a Tuesday; two founding brands paid in full)

Measure	Gate 1	As of	Target	How it is counted
Cut-off date	*2026-12-11*	*2026-12-11*		
Offices signed (signed_offices rows)	**5**	**5**	5	*Rows with a clay_row_id and agreement_signed_date on or before the cut-off.*
Combined Tuesday headcount of signed offices	**362**	**362**	350	*Each office's own intake number, never the Clay estimate.*
Brands paid in full	**1**	**1**	2	*payment_1_usd + payment_2_usd reach price_usd. Ship dates and office approvals (also Gate 1) are tracked in operations.*
Brands with any payment	**1**	**1**		*A standard brand's deposit counts here, not above.*
Gate 1, office side	**PASS**	**PASS**		*Five signed and 350 or more on a Tuesday, all inside the cluster (plan Phase 1).*
Gate 1, brand side	**SOFT PASS**	**SOFT PASS**		*Plan: one paid brand is a soft pass: run the campaign, and the second sale is the first task after it.*

Numbers for the Startup CPG posts (messages/12), as of: distinct offices or brands

[OFFICE CONVERSATIONS]	**14**
[N GET BRAND OFFERS]: q3_brands_reach_out = Y	**7**
[N ONE PERSON DECIDES]: owner_can_say_yes_alone = Y	**9**
[WHO ELSE DECIDES]: most common other_approver	**facilities**
[N WOULD PHOTO AND SURVEY]: q5_photo_and_survey = Y	**9**
[TUESDAY RANGE]: lowest to highest tuesday_headcount (first answer per office)	**35 to 200**
[N USE A SERVICE]: uses_snack_service = Y	**4**
[BRAND CONVERSATIONS]	**15**
[BRAND SPEND RANGE]: lowest low to highest high quarterly sampling spend, USD	**$0 to $4,500**
[N SEEDED OFFICES]: q3_seeded_offices = Y	**0**
[MEDIAN NUMBER NAMED]: median brand number before $1,500	**$500**
[TOP BLOCKER]: top brand objection (above)	**1. $600 / the price is more than we pay per sample elsewhere (price_per_sample)**
[QUOTE]: people who said yes to being quoted without their name (offices + brands)	**5**

Quote only rows with quote_ok_to_share = Y, never with a name. The other slots in messages/12 (top yes and no reasons, what happened, top report need) are read from the verbatims.

Counts for the copy slots (copy these into messages/04-slot-state.csv each Friday; that file wins)

offices_yes: Clay offices with status yes_in_principle, materials_sent or signed	**7**
offices_signed: Clay offices with status signed	**5**
tuesday_headcount: sum of tuesday_headcount on signed_offices (blank until one has signed)	**362**
founding_taken: paid_brands rows with tier founding (0 to 3)	**1**
brands_paid: paid_brands rows	**1**
brand_selling_on: brand Gate 0 PASS (as of) and offices_yes 2 or more	**Y**

Switches the founder sets (domain_ready, attorney_cleared, llc_formed and the rest) live only in messages/04-slot-state.csv.

Data checks (fix every FIX before reading the numbers above)

Check	Count	Result	What to do
Office_Log rows with a sync issue	**4**	**FIX**	*Read calc_sync_issue on Office_Log; fix in Clay, then re-paste.*
Brand_Log rows with a sync issue	**1**	**FIX**	*Read calc_sync_issue on Brand_Log.*
Clay office rows with an issue	**2**	**FIX**	*Sync tab, office list.*
Clay brand rows with an issue	**1**	**FIX**	*Sync tab, brand list.*
Handoff rows whose Clay status is not signed / paid	**0**	**OK**	*Set the Clay status to signed or paid.*
Clay columns missing from a paste	**0**	**OK**	*Export all columns from Clay (CONTRACTS 6.2 names).*
Days since the Clay offices paste (as of)	**0**	**OK**	*Paste a fresh export each Friday and type its date on Config.*
Days since the Clay brands paste (as of)	**0**	**OK**	*Same.*
Offices that said Y but owner or window is missing	**2**	**info**	*They do not count for Gate 0 until both are named.*
Budget probe asked but no verbatim	**0**	**OK**	*Type the answer word for word.*
Brand number given but no verbatim	**0**	**OK**	*Type the answer word for word.*
Log rows with a row_id but no real call_date	**0**	**OK**	*Type the date as YYYY-MM-DD.*
Clay touch_1_date cells stored as text	**0**	**OK**	*Reformat the column as a date in Clay or here, or they drop out of every count.*
Pipeline events beyond the export rows	**0**	**OK**	*Raise EXPORT_N in tools/build_tracker.py and rebuild, or split the file.*
Notes over the ten-minute target (as of)	**5**	**info**	*If this grows, trim the note template, not the verbatims.*
Median minutes per note (as of)	**9**	**info**	*Target 10 or less.*
Duplicate clay_row_id on signed_offices or paid_brands	**0**	**OK**	*One row per office and per brand. A second campaign for the same brand stays on its first row (renewals go on later_events).*
Number cells typed as text (for example "$600")	**0**	**OK**	*Retype as a plain number, no $ or commas: a number stored as text counts as nothing, so a $600 answer would drop out of Gate 0.*
call_date cells with a time of day	**0**	**OK**	*Retype the date alone (YYYY-MM-DD). The counts already read it by its day, but Clay and the pipeline export carry the time.*
Two or more row_ids share one org_key (counted once)	**0**	**info**	*Organisations with more than one contact in the logs, each counted once (calc_org shows the key). If two are really different organisations, type different org_key values.*
Gate 0 yes with tuesday_headcount under 30 or over 250 (as of)	**0**	**info**	*Not counted for Gate 0 (plan: 30 to 250 on a Tuesday). Check the number with the office; if it is right, it is not a participating office.*
Withdrawn yes answers (offices and brands, as of)	**1**	**info**	*Not counted for Gate 0. Clay yes_in_principle follows the latest answer; set the Clay status to no or not_now.*
SAMPLE rows in this file	**118**	**SAMPLE**	*Delete them before real use, or keep include_sample = N so they are ignored.*
